

Car Sales Dashboard Documentation

1) Purpose

This dashboard helps analyze overall car sales performance by tracking total sales value, revenue generation, pricing trends, and customer purchase behavior.

The dashboard provides insights across multiple dimensions including:

- Company performance
- Car models
- Engine types
- Customer gender
- Car colours
- Regional dealer performance

It is designed to help identify high-performing business areas and understand sales trends more effectively.

2) Data Preparation

Cleaning:

- Removed unnecessary columns such as phone number
- Corrected incorrect data types
- Removed duplicate and null values
- Standardized price and income-related fields
- Split and transformed columns for better analysis

DAX:

- Created measures for Auto and Manual car price analysis
- Calculated Total Income and Average Price
- Built company-level and category-level aggregations
- Generated KPI metrics for dashboard reporting

3) Key Insights Shown

- Auto vs Manual Car Price comparison
- Total Income and Average Price overview
- Sales analysis by Colour
- Company and Model performance analysis
- Revenue breakdown by Engine Type and Region
- Gender-based customer purchase analysis
- Regional dealer income distribution

4) How to Use the Dashboard

- Use slicers and filters to explore specific categories
- Hover over visuals to view detailed information
- Navigate across visuals for deeper business analysis
- Compare performance across companies, models, and regions

5) Design Notes

- Minimal and clean dashboard design
- Consistent colour theme for readability
- KPI cards used for high-level metrics
- Interactive visuals used for better user experience
- Charts designed for easy comparison and analysis

6) Conclusion

- This dashboard provides a clear understanding of sales trends, company performance, customer behavior, and regional revenue distribution.
- It supports business decision-making by transforming raw sales data into meaningful visual insights..
